Sections 2.1 & 2.2 - I.C.E. **Name:** _____

SHOW ALL WORK!!!! ☺

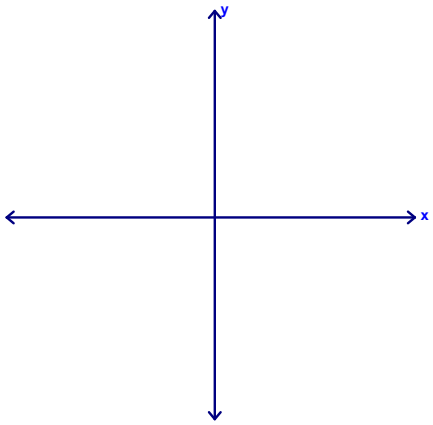
Assume you cannot use a graphing calculator for these problems.
The ones on which you CAN use a graphing calculator are starred.

1. $f(x) = -(x^2 + x - 30)$ (for vertex, use $h = \frac{-b}{2a}$ and $k = f(h)$)

   a) Vertex:

   b) x-intercepts:

   c)

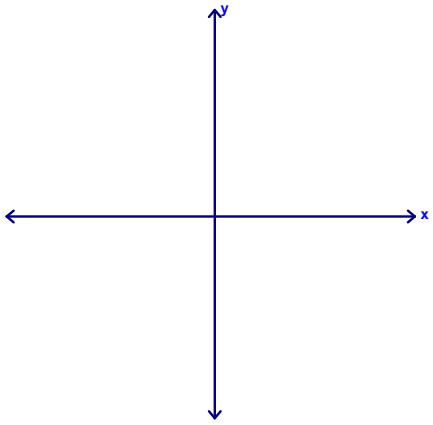


2. $f(x) = x^2 + 12x + 16$ (find the vertex by completing the square)

   b) Vertex:

   b) x-intercepts:

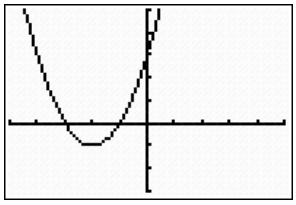
   c)



For questions 3 and 4, give the equations, in vertex form, for the following graphs.

3. Vertex: $\left(\frac{5}{2}, -\frac{3}{4}\right)$, passing through (-2, 4)

4. Use the points that are most clear on this graph:



5. Find a quadratic function whose graph has the given x – intercepts. (Many answers)

   x-intercepts: (-2, 0) and (4, 0)

*6. The path of a diver is $y = -\frac{4}{9}x^2 + \frac{24}{9}x + 12$ where y is the height (in feet) and x is the horizontal distance from the end of the diving board (in feet). What is the maximum height of the diver? (Do the work algebraically, then confirm graphically)

For questions 7 and 8, determine the left hand and right hand behavior of the graph of function. Fill in the blank with the appropriate sign (positive or negative)

7. $y = 3x^4 - 2x^3 + x$

   as $x \to \infty$, $y \to$ ___ ∞

   as $x \to -\infty$, $y \to$ ___ ∞

8. $y = 5x^5 - 6x + 3$

   as $x \to \infty$, $y \to$ ___ ∞

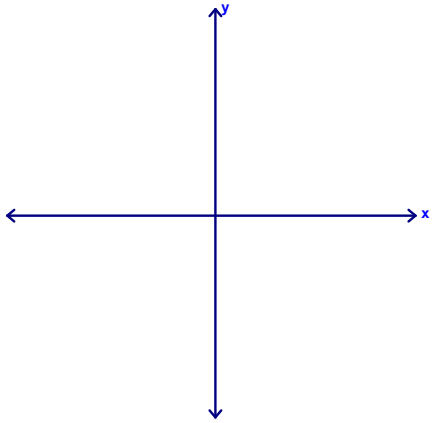
   as $x \to -\infty$, $y \to$ ___ ∞

9. $f(x) = x^3 - 6x^2 + 9x$

   a) find the zeros and determine the multiplicity of each zero

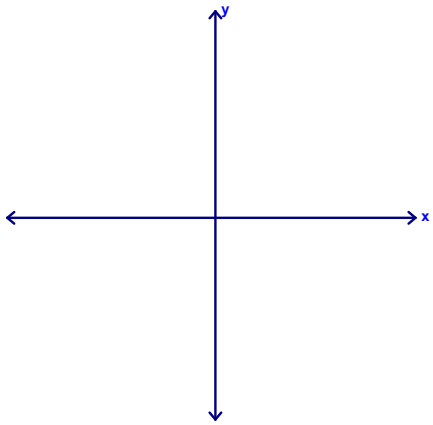
   b) determine the left/right hand behavior for each

   c) use this information to sketch a graph.



10. Find a polynomial of degree n that has the given zeros and then draw a sketch of your polynomial. You do not need to FOIL it out. (Many correct answers)

    Zeros: x = -2, 4, 7 Degree: n = 3



*11. An open box with locking tabs is to be made from a square piece of material 12 inches on one side and 9 inches on the other, and this is to be done by cutting equal squares with side length x from the corners and folding up the sides.

a) What is the volume of the box in terms of x? (you can leave in factored form)

$V(x) =$

b) What is the domain of the function V?

c) Sketch a graph of the function and find the value of x that will give the maximum volume: (be sure to adjust your window so you can see the WHOLE graph!)

Max volume at x = _____

Maximum volume IS _____
